

# MECHANICS OF STRUCTURES VOL. II

[THEORY AND ANALYSIS OF STRUCTURES]

By

Dr. H. J. Shah, S. B. Junnarkar

Edition : 24<sup>th</sup> Edition : 2015  
ISBN : 9789385039027  
Size : 135 mm × 210 mm  
Binding : Paperback  
Pages : 970 + 16 = 986

₹ 325.00 **BUY**

## ABOUT THE BOOK

This text-book published in continuation of its Vol. I. This volume discusses the theory and analysis of structures in comprehensive and lucid manner.

This book is written by an eminent author who had an experience of over thirty years in the teaching of the subject, and now, it is revised and enlarged by the experienced teacher.

*The book within its 21 chapters now contains more than:*

- \* 400 Fully solved problems
- \* 440 Examples with answers
- \* 640 Neatly drawn diagrams

*It is published entirely in SI Units.*

It is hoped that this edition will prove extremely useful to the students of Civil, Mechanical and Architecture Engineering reading for Degree Examinations of all the Universities of India, Diploma Examinations conducted by various Boards of Technical Examinations, also Certificate Courses, as well as for the A.M.I.E., U.P.S.C., G.A.T.E., I.E.S. and other similar competitive and professional Examinations. It should also prove of great interest and practical use to the practising engineers.

## CONTENT

- 1: INFLUENCE LINES FOR BEAMS
  - 2: ROLLING LOADS
  - 3: INFLUENCE LINES FOR TRUSSES
  - 4: MASONRY DAMS AND RETAINING WALLS
  - 5: CABLES AND SUSPENSION BRIDGES
  - 6: THREE HINGED ARCHES
  - 7: FORCES IN FRAMED STRUCTURES
  - 8: INDETERMINATE STRUCTURES
  - 9: DEFLECTIONS I
  - 10: DEFLECTIONS II
  - 11: CONSISTENT DEFORMATION I
  - 12: CONSISTENT DEFORMATION II
  - 13: LEAST WORK AND THEOREM OF THREE MOMENT
  - 14: INDETERMINATE ARCHES
  - 15: SLOPE DEFLECTION METHOD
  - 16: MOMENT DISTRIBUTION METHOD
  - 17: COLUMN ANALOGY METHOD
  - 18: THE ELASTIC CENTRE
  - 19: THE RECIPROCAL THEOREM
  - 20: PLASTIC THEORY
  - 21: INTRODUCTION TO MATRIX METHODS OF ANALYSIS
- INDEX

**Checklist**

**MECHANICS OF STRUCTURES VOL. II**  
**DETAILED CONTENTS**

**Chapter 1 INFLUENCE LINES FOR BEAMS**

- 1-1. Introductory
  - 1-2. Influence line
  - 1-3. Influence lines for simple beam reactions
  - 1-4. Influence lines for simple beam shears
  - 1-5. Influence lines for simple beam moments
  - 1-6. Uses of influence lines
  - 1-7. Influence lines for girders with floor joists
  - 1-8. Compound beams
  - 1-9. Closure
- Examples I

**Chapter 2 ROLLING LOADS**

- 2-1. Rolling loads
  - 2-2. Maximum shear in a beam supporting uniformly distributed loads
  - 2-3. Maximum bending moments at sections in beams supporting uniformly distributed load
  - 2-4. Maximum shear at sections in a beam supporting two concentrated loads
  - 2-5. Maximum moment at sections in a beam supporting two concentrated loads
  - 2-6. Maximum end shear in a beam supporting a series of moving concentrated loads
  - 2-7. Maximum shear at sections of beams supporting a series of moving concentrated loads
  - 2-8. Maximum moment at a section in a beam supporting a series of moving concentrated loads
  - 2-9. Absolute maximum moment in a beam supporting a series of moving concentrated loads
  - 2-10. Maximum S.F. and maximum B.M. diagrams
  - 2-11. Equivalent uniformly distributed load
  - 2-12. Combined dead load and moving load S.F. diagrams: Focal length
- Examples II

**Chapter 3 INFLUENCE LINES FOR TRUSSES**

- 3-1. Introductory
  - 3-2. Bridge floor system
  - 3-3. Influence lines for truss reactions
  - 3-4. Influence lines for member forces
  - 3-5. Determination of maximum forces
  - 3-6. Counters in bridge trusses
  - 3-7. Influence lines for non-parallel chord trusses
- Examples III

**Chapter 4 MASONRY DAMS AND RETAINING WALLS**

- 4-1. Water pressure
  - 4-2. Conditions of stability
  - 4-3. The minimum bottom width for stability
  - 4-4. Trapezoidal section with a sloping water face
  - 4-5. Other forms of section
  - 4-6. Resultant thrust outside the middle third
  - 4-7. Retaining walls
  - 4-8. The inclined plane
  - 4-9. Rankine's theory of earth pressure
  - 4-10. Retaining wall of trapezoidal section, earth level with the top of the wall
  - 4-11. Surcharged retaining wall
  - 4-12. Graphical methods
  - 4-13. Wedge theory of earth pressure: Rebhann – Häseler's method
  - 4-14. Minimum depth of foundation
- Examples IV

**Chapter 5 CABLES AND SUSPENSION BRIDGES**

- 5-1. Equilibrium of a light suspended cord under a given system of loading
  - 5-2. Shape of the cord
  - 5-3. Light suspension bridges
  - 5-4. Cable supports at different levels
  - 5-5. Anchor cables
  - 5-6. Temperature stresses
  - 5-7. The Catenary
  - 5-8. Moving loads on suspension bridges
  - 5-9. Suspension bridge with three hinged stiffening girders
  - 5-10. Two hinged stiffening girder
  - 5-11. Temperature stresses in stiffening girder
- Examples V

**Chapter 6 THREE HINGED ARCHES**

- 6-1. Metal arches
  - 6-2. Linear arch or line of thrust
  - 6-3. Bending moments: Eddy's theorem
  - 6-4. Three hinged arch
  - 6-5. Braced three hinged arch
  - 6-6. Graphical methods
  - 6-7. Moving loads on three hinged arches
  - 6-8. Temperature effects
- Examples VI

**Chapter 7 FORCES IN FRAMED STRUCTURES**

- 7-1. Framed structures with sub-divided panels
- 7-2. Pratt truss with parallel chords and sub-struts: through type
- 7-3. Pratt truss with parallel chords and sub-ties: deck type
- 7-4. Pratt truss with non-parallel chords
- 7-5. Warren truss with sub-divided panels
- 7-6. Rolling loads: Influence lines
- 7-7. Pratt truss with inclined chord: Influence lines
- 7-8. The Wichert Truss
- 7-9. Dynamical loads on bridges: Impact allowance
- 7-10. Wind pressure
- 7-11. Working stresses

**Chapter 8 INDETERMINATE STRUCTURES**

- 8-1. Determinateness of the structure
  - 8-2. Use of indeterminate structures
  - 8-3. Methods of analysis
  - 8-4. Approximate analysis of indeterminate structures
  - 8-5. Truss with two hinges
  - 8-6. Trusses with two diagonals in each panel
  - 8-7. Industrial frame
  - 8-8. Building frames subjected to gravity loads
  - 8-9. Building frames subjected to lateral loads
  - 8-10. The portal method
  - 8-11. The cantilever method
  - 8-12. Vierendeel truss
- Examples VIII

**Chapter 9 DEFLECTIONS I**

- 9-1. Introductory
  - 9-2. Moment area method
  - 9-3. Method of elastic weights
  - 9-4. Conjugate beam method
  - 9-5. Virtual work — unit load method: Basic formula
  - 9-6. The unit load method applied to deflections of beams and frames
  - 9-7. The unit load method applied to beam rotations
  - 9-8. Strain energy
  - 9-9. Castigliano's first theorem
  - 9-10. Castigliano's first theorem applied to beam deflections and rotations
- Examples IX

**MECHANICS OF STRUCTURES VOL. II**  
**DETAILED CONTENTS**

**Chapter 10 DEFLECTIONS II**

DEFLECTION OF FRAMED STRUCTURES

- 10-1. The unit load method applied to deflections of trusses
- 10-2. The first theorem of Castigliano
- 10-3. Graphical methods: Williot-Mohr diagrams
- 10-4. Maxwell's theorem of reciprocal deflections
- 10-5. Influence line for deflection  
Examples X

**Chapter 11 CONSISTENT DEFORMATION I**

- 11-1. The method of consistent deformation
- 11-2. Beams with one redundant
- 11-3. Beams with two or more redundants
- 11-4. Continuous beams
- 11-5. Fixed beams
- 11-6. Support settlement
- 11-7. Influence lines for indeterminate beams
- 11-8. Qualitative influence lines  
Examples XI

**Chapter 12 CONSISTENT DEFORMATION II**

ANALYSIS OF INDETERMINATE TRUSSES

- 12-1. Externally redundant trusses
- 12-2. Internally redundant trusses
- 12-3. Externally and internally redundant trusses
- 12-4. Secondary forces
- 12-5. Influence lines for statically indeterminate trusses  
Examples XII

**Chapter 13 LEAST WORK AND THEOREM OF THREE MOMENT**

- 13-1. The second theorem of Castigliano: Principle of least work or minimum strain-energy
- 13-2. Portal frames
- 13-3. The three moment theorem
- 13-4. Support settlement  
Examples XIII

**Chapter 14 INDETERMINATE ARCHES**

- 14-1. Bending of a curved bar
- 14-2. Two-hinged arch
- 14-3. Moving loads on two-hinged arches
- 14-4. Temperature stresses
- 14-5. Fixed arch
- 14-6. Temperature stresses
- 14-7. Two-hinged arch: Strain energy method
- 14-8. Suspension cable with a two-hinged stiffening girder
- 14-9. The masonry arch
- 14-10. Fuller's test for stability of an arch  
EXAMPLES XIV

**Chapter 15 SLOPE DEFLECTION METHOD**

- 15-1. Introduction
- 15-2. Sign conventions
- 15-3. Development of slope deflection equations: Assumptions
- 15-4. Modification for simple ends
- 15-5. Frames with no side-sway
- 15-6. Frames with side-sway  
Examples XV

**Chapter 16 MOMENT DISTRIBUTION METHOD**

- 16-1. Introductory
- 16-2. Description of the method
- 16-3. Carry-over moment

- 16-4. Distribution factors
- 16-5. Definitions
- 16-6. Sign conventions
- 16-7. Fixed end moments
- 16-8. Application of method
- 16-9. Modification of stiffness for simple ends
- 16-10. Shear and moment diagrams
- 16-11. Overhanging beams  
MOMENT DISTRIBUTION FOR FRAMES
- 16-12. Frames with side-sway prevented
- 16-13. Frames with side-sway
- 16-14. Portal frames with inclined members  
Examples XVI

**Chapter 17 COLUMN ANALOGY METHOD**

- 17-1. Introductory
- 17-2. The method
- 17-3. Stiffness and carry-over factor
- 17-4. Maxwell's reciprocal law
- 17-5. Analysis of frames by column analogy method
- 17-6. Analysis of gable frames
- 17-7. Analysis of unsymmetrical frames  
Examples XVII

**Chapter 18 THE ELASTIC CENTRE**

- 18-1. Introductory
- 18-2. The fixed-base portal frame
- 18-3. The elastic centre
- 18-4. Fixed arches
- 18-5. Circular arch
- 18-6. Two-hinged arches  
Examples XVIII

**Chapter 19 THE RECIPROCAL THEOREM**

- 19-1. Introductory
- 19-2. The reciprocal theorem
- 19-3. Influence coefficients
- 19-4. Proof
- 19-5. Models  
Examples XIX

**Chapter 20 PLASTIC THEORY**

- 20-1. Limit design: Load factor
- 20-2. Plastic bending: Plastic hinge: Shape factor
- 20-3. Simply supported beams
- 20-4. Propped cantilevers
- 20-5. Encastré beams
- 20-6. Design of beams
- 20-7. Continuous beams
- 20-8. Portal frames
- 20-9. Analytical methods: Virtual work
- 20-10. Combined bending and axial load  
Examples XX

**Chapter 21 INTRODUCTION TO MATRIX METHODS OF ANALYSIS**

- 21-1. Actions and displacements
- 21-2. Equilibrium and compatibility
- 21-3. Static and kinematic indeterminacy
- 21-4. Structural mobilities
- 21-5. Flexibility and stiffness
- 21-6. General case
- 21-7. Closure
