

REINFORCED CONCRETE VOL. I

[ELEMENTARY REINFORCED CONCRETE]

~~~~~ ❁ ~~~~~  
By  
Dr. H. J. Shah

**Edition** : 11<sup>th</sup> Edition : 2016  
**ISBN** : 9789385039188  
**Size** : 170 mm × 235 mm  
**Binding** : Paperback  
**Pages** : 928 + 16 = 944

₹ 425.00 **BUY**

## ABOUT THE BOOK

This Volume I elucidates the basic principles involved in the analysis and design of Elementary Reinforced Concrete Structures. The book begins with an introduction to concrete technology and continues with chapters on design of beams, slabs, columns, foundations, retaining walls, etc. These chapters are based on the Limit State Method following latest revision of IS : 456-2000. A few computer programmes to design a section for flexure are introduced. It also includes chapters on formwork and detailing of reinforcements.

*The salient features of the book are:*

- \* Simple, lucid and easy language
- \* Step-by-step treatment
- \* Exposition to practical problems

*This book in its 24 chapters now contains:*

- \* 500 Self explanatory and neat diagrams with excellent detailing
- \* 228 Fully-solved examples
- \* 257 Unsolved examples with answers and questions at the end of chapters
- \* 150 Useful tables
- \* 9 Computer programmes
- \* 235 Short questions with answers is given in APPENDIX A.

It is hoped that the book should be extremely useful to the Civil Engineering and Architecture students preparing for Degree Examinations of all the Indian Universities, Diploma Examinations conducted by various Boards of Technical Education, Certificate Courses, as well as for the A.M.I.E., U.P.S.C., G.A.T.E. and other similar competitive and professional Examinations.

## CONTENT

- 1: INTRODUCTION
  - 2: PROPERTIES OF MATERIALS
  - 3: STRUCTURAL CONCRETE
  - 4: DESIGN FOR FLEXURE: FUNDAMENTALS
  - 5: DESIGN FOR FLEXURE: WORKING STRESS METHOD
  - 6: LIMIT STATE METHOD
  - 7: SHEAR AND DEVELOPMENT LENGTH
  - 8: DEFLECTION AND CRACKING
  - 9: SIMPLY SUPPORTED AND CANTILEVER BEAMS
  - 10: SIMPLY SUPPORTED AND CANTILEVER SLABS
  - 11: CONTINUOUS BEAMS AND SLABS
  - 12: TORSION
  - 13: STAIRS
  - 14: LOAD CALCULATIONS - 1
  - 15: SIMPLE DESIGNS
  - 16: FRAMED BEAMS
  - 17: COLUMNS
  - 18: DESIGN OF FOUNDATIONS: FUNDAMENTALS
  - 19: ISOLATED FOOTINGS
  - 20: COMBINED FOOTINGS
  - 21: PILE FOUNDATIONS
  - 22: RETAINING WALLS
  - 23: FORMWORK
  - 24: DETAILING OF REINFORCEMENT
- APPENDIX A : SHORT QUESTIONS WITH ANSWERS  
APPENDIX B : USEFUL TABLES  
INDEX

Checklist

**REINFORCED CONCRETE – VOL. I**  
**DETAILED CONTENTS**

**Chapter 1 INTRODUCTION**

- 1-1. Structural design—Role of a structural engineer
- 1-2. Reinforced concrete
- 1-3. Structural elements
- 1-4. Loads on structure
- 1-5. Ductility versus brittleness
- 1-6. Strength and serviceability
- 1-7. Methods of design
- 1-8. Codes of practice
- 1-9. Adaptation of SI units

QUESTIONS I

**Chapter 2 PROPERTIES OF MATERIALS**

- 2-1. Constituents of concrete

CEMENT

- 2-2. General
- 2-3. Manufacture of Portland cement
- 2-4. Basic chemistry of cement
- 2-5. Chemical properties of cement
- 2-6. Hydration of cement
- 2-7. Types of cement
- 2-8. Selection of cement for production of concrete
- 2-9. Tests for cement
- 2-10. Fineness test
- 2-11. Consistency of standard cement paste
- 2-12. Test for setting times
- 2-13. Soundness test
- 2-14. Autoclave expansion
- 2-15. Density test
- 2-16. Test for compressive strength
- 2-17. Heat of hydration test
- 2-18. Storing of cement

AGGREGATES

- 2-19. Introductory
- 2-20. Aggregate size
- 2-21. Fine and coarse aggregate
- 2-22. Particle shape
- 2-23. Surface texture
- 2-24. Strength of aggregate
- 2-25. Specific gravity
- 2-26. Bulk density
- 2-27. Water absorption and surface moisture
- 2-28. Bulking of sand
- 2-29. Deleterious substances in aggregates
- 2-30. Soundness of aggregate
- 2-31. Alkali-aggregate reaction
- 2-32. Sieve analysis
- 2-33. Standard grading
- 2-34. Use of grading curves

WATER

- 2-35. Water for mixing concrete

CHEMICAL ADMIXTURES

- 2-36. Admixtures

REINFORCEMENT

- 2-37. Steel as reinforcement
- 2-38. Types of reinforcement
- 2-39. Mild steel bars
- 2-40. Cold Twisted Deformed (CTD) bars
- 2-41. Thermo-mechanically treated (TMT) bars
- 2-42. Corrosion-resistant steel
- 2-43. Hard-drawn steel wire fabric
- 2-44. Bending and fixing of bars
- 2-45. Requirements for reinforcing bars
- 2-46. Welding of reinforcement
- 2-47. General notes for site engineers

QUESTIONS II

EXAMPLES II

**Chapter 3 STRUCTURAL CONCRETE**

- 3-1. Proportioning of ingredients
- 3-2. Measurement of materials
- 3-3. Mixing and placing of concrete
- 3-4. Compaction
- 3-5. Curing
- 3-6. Formwork for R.C.C. members
- 3-7. Workability
- 3-8. Factors influencing workability
- 3-9. Strength of concrete and water-cement ratio
- 3-10. Compressive strength of concrete
- 3-11. Tensile strength of concrete
- 3-12. Non-destructive tests
- 3-13. Stress-strain behaviour of concrete under short term loads
- 3-14. Short term static modulus of elasticity
- 3-15. Shrinkage
- 3-16. Creep
- 3-17. Durability of concrete
- 3-18. Temperature change
- 3-19. Concrete quality control
- 3-20. Sampling and strength tests of concrete
- 3-21. Statistical analysis of test results
- 3-22. Standard deviation
- 3-23. Acceptance criteria

QUESTIONS III

EXAMPLES III

**Chapter 4 DESIGN FOR FLEXURE: FUNDAMENTALS**

- 4-1. Introductory
- 4-2. Review of theory of simple bending
- 4-3. Practical requirements of an R.C.C. beam
- 4-4. Size of the beam
- 4-5. Cover to the reinforcement
- 4-6. Spacing of bars
- 4-7. Design requirements of a beam
- 4-8. Classification of beams
- 4-9. Effective width of a flanged beam
- 4-10. Balanced, Under-reinforced and Over-reinforced design
- 4-11. Cracking moment
- 4-12. Bending of an R.C.C. beam
- 4-13. Design methods

**Chapter 5 DESIGN FOR FLEXURE: WORKING STRESS METHOD**

- 5-1. Permissible stresses
  - 5-2. Modular ratio
  - 5-3. Design for flexure—assumptions
- SINGLY REINFORCED BEAMS
- 5-4. Derivation of formulae for balanced design
  - 5-5. Transformed area method
  - 5-6. Types of problems
  - 5-7. Analysis of the section
  - 5-8. Design of the section
  - 5-9. Use of design aids

DOUBLY REINFORCED BEAMS

- 5-10. Introductory
- 5-11. Derivation of formulae for balanced design
- 5-12. Transformed area method
- 5-13. Types of problems
- 5-14. Use of design aids

FLANGED BEAMS

- 5-15. Moment of resistance of a singly reinforced flanged beam
- 5-16. Types of problems
- 5-17. Doubly reinforced flanged beams
- 5-18. Slabs

EXAMPLES V

**REINFORCED CONCRETE – VOL. I**  
**DETAILED CONTENTS**

**Chapter 6 LIMIT STATE METHOD**

- 6-1. Inelastic behaviour of materials
- 6-2. Ultimate load theory
- 6-3. Limit state method
- 6-4. Limit state of collapse
- 6-5. Limit state of serviceability
- 6-6. Characteristic and design values and partial safety factors
- 6-7. Limit state of collapse: Flexure

**SINGLY REINFORCED RECTANGULAR BEAMS**

- 6-8. Derivation of formulae
- 6-9. General values
- 6-10. Types of problems
- 6-11. Failure of R.C.C. beam in flexure
- 6-12. Code provisions to prevent the brittle failure
- 6-13. Computer programmes

**DOUBLY REINFORCED BEAMS**

- 6-14. Derivation of formulae
- 6-15. Types of problems
- 6-16. Use of design aids
- 6-17. Computer programmes for doubly reinforced rectangular sections

**FLANGED BEAMS**

- 6-18. Introductory
- 6-19. Position of neutral axis
- 6-20. Derivation of formulae
- 6-21. Use of design aids
- 6-22. Doubly reinforced flanged beams
- 6-23. Sections subjected to reversal of moments
- 6-24. Computer programmes for flanged sections

**EXAMPLES VI**

**Chapter 7 SHEAR AND DEVELOPMENT LENGTH**

- 7-1. Shear in structural members
- 7-2. Flexure and shear in homogeneous beam
- 7-3. Shear in reinforced concrete beams – Elastic theory
- 7-4. Diagonal tension and diagonal compression
- 7-5. Limit state theory
- 7-6. Design shear strength of concrete
- 7-7. Design for shear
- 7-8. Shear reinforcement in beams
- 7-9. Practical considerations
- 7-10. Critical sections for shear
- 7-11. Design of a complete beam for shear
- 7-12. Use of design aids
- 7-13. Shear design of beams with variable depth

**DEVELOPMENT LENGTH**

- 7-14. Introductory
- 7-15. Development length : Pull out test
- 7-16. Code provision
- 7-17. Use of bundled bars
- 7-18. Anchoring reinforcements
- 7-19. Bearing stresses at bends
- 7-20. Reinforcement splicing

**EXAMPLES VII**

**Chapter 8 DEFLECTION AND CRACKING DEFLECTION**

- 8-1. Introductory
- 8-2. Span/effective depth ratio
- 8-3. Control of deflection on site
- 8-4. Deflection calculations
- 8-5. Short term deflections
- 8-6. Long term deflections

**CRACKING**

- 8-7. Introductory
- 8-8. Bar spacing controls
- 8-9. Calculation of crack width

**EXAMPLES VIII**

**Chapter 9 SIMPLY SUPPORTED AND CANTILEVER BEAMS**

- 9-1. Design procedure
- 9-2. Anchorage of bars: Check for development length
- 9-3. Reinforcement requirements
- 9-4. Slenderness limits for beams to ensure lateral stability

**SIMPLY SUPPORTED BEAMS**

- 9-5. Introductory
- 9-6. Design S.F. diagram
- 9-7. Curtailment of bars
- 9-8. Design of a template
- 9-9. Design of a lintel

**CANTILEVER BEAMS**

- 9-10. Design considerations

**EXAMPLES IX**

**Chapter 10 SIMPLY SUPPORTED AND CANTILEVER SLABS**

- 10-1. Introductory
- 10-2. Analysis
- 10-3. One-way spanning slabs
- 10-4. Simply supported one-way slab
- 10-5. Detailing of slabs
- 10-6. Inclined slabs
- 10-7. Straight slabs having a small length inclined along the span
- 10-8. Cantilever slab
- 10-9. Concentrated load on slabs
- 10-10. Two-way slabs
- 10-11. Simply supported two-way slabs

**EXAMPLES X**

**Chapter 11 CONTINUOUS BEAMS AND SLABS**

**CONTINUOUS BEAMS**

- 11-1. Introductory
- 11-2. Analysis parameters
- 11-3. Live load arrangements
- 11-4. Redistribution of moment
- 11-5. Reinforcement requirements
- 11-6. Typical continuous beam details
- 11-7. Flexure design considerations
- 11-8. Simplified analysis for uniform loads
- 11-9. Moment and shear coefficients for continuous beams

**CONTINUOUS SLABS**

- 11-10. Continuous one-way slab
- 11-11. Restrained two-way slabs

**EXAMPLES XI**

**Chapter 12 TORSION**

- 12-1. General
- 12-2. Effect of torsion: Provision of reinforcement
- 12-3. Code provisions
- 12-4. General cases of torsion

**EXAMPLES XII**

**Chapter 13 STAIRS**

- 13-1. Stair slabs
- 13-2. Classification of stairs
- 13-3. Design requirements for stair
- 13-4. Reducing the span
- 13-5. Tread-riser staircase
- 13-6. Closure

**EXAMPLES XIII**

**Chapter 14 LOAD CALCULATIONS - 1**

- 14-1. Introductory
- 14-2. Loads on slabs
- 14-3. Loading on beams from one-way slabs
- 14-4. Wall loads and self weight of beams
- 14-5. Loading on beams from two-way slabs
- 14-6. Unit loads

**EXAMPLES XIV**

**REINFORCED CONCRETE – VOL. I**  
**DETAILED CONTENTS**

**Chapter 15 SIMPLE DESIGNS**

- 15-1. Introductory
- 15-2. Design S.F. diagram
- 15-3. Loads from two-way slabs  
EXAMPLES XV

**Chapter 16 FRAMED BEAMS**

- 16-1. Structural joints
- 16-2. Fixed, cantilever and framed beams
- 16-3. Analysis and design of the framed beams
- 16-4. Single span portal frame
- 16-5. Substitute frame  
EXAMPLES XVI

**Chapter 17 COLUMNS**

- 17-1. Introductory
- 17-2. Braced and Unbraced columns
- 17-3. No-Sway and Sway columns
- 17-4. Tied, Spiral and Composite columns
- 17-5. Short and Long columns
- 17-6. Reinforcement requirements
- 17-7. Minimum eccentricity
- 17-8. Assumptions made for design
- SHORT COLUMNS
- 17-9. Axially loaded tied columns
- 17-10. Axially loaded spiral columns
- 17-11. Short eccentrically loaded columns—uniaxial bending
- 17-12. Modes of failure in combined axial load and uniaxial bending
- 17-13. Types of problems
- 17-14. The interaction diagram
- 17-15. Stress block parameters when N.A. lies outside the section
- 17-16. Construction of interaction diagrams
- 17-17. Pure axial load
- 17-18. Axial load with uniaxial moment
- 17-19. Neutral axis (N.A.) lies outside the section
- 17-20. Neutral axis (N.A.) lies inside the section
- 17-21. Charts for compression with bending
- 17-22. Tension with bending
- 17-23. Use of interaction diagram
- 17-24. Unsymmetrically reinforced columns with uniaxial eccentricity
- 17-25. Short eccentrically loaded columns: Biaxial bending
- SLENDER COLUMNS
- 17-26. Slender columns
- 17-27. Effective length calculations
- 17-28. Lengths of column
- 17-29. Design of slender columns
- 17-30. Design and detailing of a practical column  
EXAMPLES XVII

**Chapter 18 DESIGN OF FOUNDATIONS: FUNDAMENTALS**

- 18-1. Introductory
- 18-2. Classification of foundations
- 18-3. Types of footings
- 18-4. R.C.C. footings
- 18-5. Aspects of soil design
- 18-6. General soil design considerations
- 18-7. Footing for eccentrically loaded columns
- 18-8. General structural design considerations
- 18-9. Concrete pedestal
- 18-10. Transfer of load at the base of column  
EXAMPLES XVIII

**Chapter 19 ISOLATED FOOTINGS**

- 19-1. Introductory
- 19-2. Wall footings
- 19-3. Axially loaded pad footing

- 19-4. Axially loaded sloped footing
- 19-5. Eccentrically loaded footings
- 19-6. Fixing up footing dimensions
- 19-7. Isolated slab and beam type footing
- 19-8. Resistance to horizontal loads
- 19-9. Footing for multi-storeyed building columns  
EXAMPLES XIX

**Chapter 20 COMBINED FOOTINGS**

- 20-1. Combined footings
- 20-2. Combined footing for two axially loaded columns
- 20-3. Strap footings
- 20-4. Strip footings
- 20-5. Raft foundation
- 20-6. Closure  
EXAMPLES XX

**Chapter 21 PILE FOUNDATIONS**

- 21-1. Introductory
- 21-2. Loads on pile groups
- 21-3. Soil design of a pile
- 21-4. Structural design of a pile
- 21-5. Design of a pile cap  
EXAMPLES XXI

**Chapter 22 RETAINING WALLS**

- 22-1. Introductory
- 22-2. Types of retaining walls
- 22-3. Earth pressure on walls
- 22-4. Calculation of earth pressure
- 22-5. Earth pressure of submerged soil
- 22-6. Earth pressure due to surcharge
- 22-7. Drainage of retaining walls
- 22-8. Stability requirements
- CANTILEVER RETAINING WALL
- 22-9. Preliminary proportioning of cantilever retaining wall
- 22-10. Design of a cantilever retaining wall
- COUNTERFORT RETAINING WALL
- 22-11. Counterfort wall
- 22-12. Stability and design procedure  
EXAMPLES XXII

**Chapter 23 FORMWORK**

- 23-1. Introductory
- 23-2. Requirements for good formwork
- 23-3. Materials for forms
- 23-4. Choice of formwork
- 23-5. Loads on formwork
- 23-6. Permissible stresses for timber
- 23-7. Design of formwork
- 23-8. Shuttering for columns
- 23-9. Shuttering for beam and slab floor
- 23-10. Practical considerations
- 23-11. Erection of forms
- 23-12. Action prior to and during concreting
- 23-13. Striking of forms  
EXAMPLES XXIII

**Chapter 24 DETAILING OF REINFORCEMENT**

- 24-1. Introduction
- 24-2. General informations for drawing
- 24-3. Drafting
- 24-4. Columns framing plan and foundation details
- 24-5. Columns details
- 24-6. Slabs and beams details
- 24-7. Closure
