

GEOTECHNICAL AND FOUNDATION ENGINEERING

By

A. K. Verma, Rahul Verma

Edition : 1st Edition : 2021
ISBN : 9789385039515
Binding : Paperback
Pages : 576 + 16 = 592
Size (mm) : 235 × 28 × 170
Weight : 870 g

₹ 600.00 **BUY**

ABOUT THE BOOK

This book presents the basic principles involved in analysis and design in the field of Geotechnical and Foundation Engineering written in a simple manner. The subject matter is characterized by comprehensive as well as methodical, easy-to-follow style and canvassed along with theory, variety of examples and useful tables. Each topic of the book has been arranged in such a way that reader is empowered with an in-depth knowledge of the subject. Latest Codes of Indian Standards have been applied for solving the problems.

The outline of the book is as mentioned below:

Chapter 1 through 4 deal with the basic soil characteristics and its classification.
Chapter 5 discusses clay mineralogy and soil structures.
Chapter 6 and 7 deal with hydraulic characteristics of the soil i.e., effective stress, capillarity and permeability as well as seepage through soils.
Chapter 8 discusses the stress distribution in soils due to surface loads.
Chapter 9 through 13 deal with the shearing strength and its applications such as soil compaction, shear strength of soils, arching in soils and braced cuts, lateral earth pressure and stability of slopes.
Chapter 14 discusses the compressibility characteristics of the soils and consolidation.
Chapter 15 through 17 deal with the foundation analysis and design of shallow and deep foundation including advanced topics, which will be useful not only to under graduate students but to post graduation students and consultants.
Chapter 18 deals with the topic of flexible retaining structures and cofferdams.
Chapter 19 focuses on geosynthetics: application and design.
Chapter 20 gives an overview of laboratory experiments and insight into construction field equipment.
At the end Multiple Choice Questions (MCQ) have been given as Appendix which cover the entire syllabus of Geotechnical and Foundation Engineering.

Salient features of the book:

- 384 Neatly drawn self explanatory sketches
- 135 Useful tables
- 165 Typical solved examples
- 151 Questions at the end of the chapters
- 19 Laboratory experiments.

The book in the present form will prove to be extremely useful to the students preparing for the Degree examinations in Civil Engineering and Architecture of all the Indian Universities, Diploma examinations conducted by various Boards of Technical Education, Certificate Courses as well as for the A.M.I.E., U.P.S.C., G.A.T.E., I.E.S., and other similar competitive and professional examinations. It should also be an immense use to practicing Civil Engineers.

CONTENT

- 1: INTRODUCTION
- 2: BASIC TERMINOLOGY AND INTERRELATIONS
- 3: INDEX PROPERTIES OF SOILS AND CLASSIFICATION TESTS
- 4: CLASSIFICATION OF SOILS
- 5: CLAY MINERALOGY AND SOIL STRUCTURES
- 6: EFFECTIVE STRESS, CAPILLARITY AND PERMEABILITY
- 7: SEEPAGE THROUGH SOILS
- 8: STRESS DISTRIBUTION IN SOILS DUE TO SURFACE LOADS
- 9: SOIL COMPACTION
- 10: SHEAR STRENGTH OF SOILS
- 11: ARCHING IN SOILS AND BRACED CUTS
- 12: LATERAL EARTH PRESSURE
- 13: STABILITY OF SLOPES
- 14: COMPRESSIBILITY OF SOILS AND CONSOLIDATION
- 15: SHALLOW FOUNDATIONS AND BEARING CAPACITY
- 16: PILE FOUNDATION
- 17: WELL FOUNDATIONS
- 18: FLEXIBLE RETAINING STRUCTURES AND COFFERDAMS
- 19: GEOSYNTHETICS: APPLICATION AND DESIGN
- 20: LABORATORY EXPERIMENTS AND FIELD EQUIPMENT
- APPENDIX A
- INDEX

Catalogue Checklist

GEOTECHNICAL AND FOUNDATION ENGINEERING
DETAILED CONTENTS

CHAPTER 1 INTRODUCTION

- 1-1. Geotechnical engineering
- 1-2. History of Development
- 1-3. Field of geotechnical Engineering
- 1-4. Soil formation and soil types
Transported soils are further classified according to the transporting agency and method of deposition
Some of the typical soils that we come across are as follows

Exercises 1

CHAPTER 2 BASIC TERMINOLOGY AND INTERRELATIONS

- 2-1. Soil Mass
 - 2-2. Soil Mass as Three phase System
 - 2-3. Soil Mass as two Phase System
 - 2-4. Basic Terms and Definitions
 - (1) Void ratio, e
 - (2) Porosity, n
 - (3) Degree of saturation, s_r
 - (4) Air content, a_c
 - (5) Percentage air voids, n_a
 - 2-5. Water content, w
 - 2-6. Unit weight and densities
 - (1) Unit weight of water, γ_w
 - (2) Bulk/total unit weight, γ_t
 - (3) Dry unit weight, γ_d
 - (4) Saturated unit weight, γ_{sat}
 - (5) Submerged unit weight, γ'
 - (6) Unit weight of soil solid, γ_s
 - 2-7. Specific gravity, G
 - (1) Specific gravity of soil particles
 - (2) Specific gravity of soil mass, G_m
 - 2-8. Functional Relationship
 - (1) Relation between e and n
 - (2) Relation between e , S_r , w and G
 - (3) Relation between γ_t , γ_d and w
 - (4) Expression for γ_t , γ_d , γ_{sat} and γ'
 - (5) Expression for γ_d in terms of n_a , G , γ_w and w
 - 2-9. Typical examples based on three phase diagram
- Exercises 2

CHAPTER 3 INDEX PROPERTIES OF SOILS AND CLASSIFICATION TESTS

- 3-1. Introduction
- 3-2. Specific Gravity
- 3-3. Water Content
 - (1) Oven-drying method
 - (2) Pycnometer method
 - (3) Rapid method
- 3-4. Size and Shape of Soil Particles
- 3-4-1. Sieve Analysis
- 3-4-2. Sedimentation Analysis/
Wet-Mechanical Analysis
- 3-5. Consistency Of Clays: Atterberg Limits
- 3-6. Significance of other Soil Aggregate Properties
 - (1) Permeability
 - (2) Unconfined compressive strength
 - (3) Sensitivity and thixotropy
 - (4) Void ratio, porosity, unit weight
 - (5) Relative density or density index
 - (6) Activity of soils
 - (7) Specific surface
 - (8) Collapsible soil

Exercises 3

CHAPTER 4 CLASSIFICATION OF SOILS

- 4-1. Introduction
- 4-2. Unified Soil Classification System (USCS)
 - (1) Coarse grained soils
 - (2) Fine grained soils

- 4-3. Aashto Soil classification system
 - (1) General
 - (2) Classification procedure
 - (3) Organic Soils
 - 4-4. Indian standard soil classification system
 - 4-5. Application of soil classification
 - 4-6. Textural classification of soils
 - 4-7. Limitations of uses and isscs
 - 4-8. Typical examples of classification of soils
- Exercises 4
References 4

CHAPTER 5 CLAY MINERALOGY AND SOIL STRUCTURES

- 5-1. Introduction
 - 5-2. Clay minerals
 - 5-2-1. Atomic bonds
 - (1) Primary valence bonds or ionic bonds
 - (2) Secondary valence bonds
 - 5-2-2. Structure of clay minerals
 - (1) Tetrahedral or silica sheet
 - (2) Octahedral or alumina sheet
 - 5-2-3. Isomorphous Substitution
 - (1) Kaolinite
 - (2) Montmorillonite
 - (3) Illite
 - 5-3. Clay - water relations
 - (1) Adsorbed water
 - (2) Base (cation) exchange capacity
 - 5-4. Clay particle interaction
 - 5-5. Soil structure and fabric
 - 5-6. Granular soil fabric
- Exercises 5
References 5

CHAPTER 6 EFFECTIVE STRESS, CAPILLARITY AND PERMEABILITY

- 6-1. Introduction
 - 6-2. Principle of effective stress
 - 6-3. Physical meaning of effective stress
 - 6-4. Capillarity in soils
 - 6-5. Permeability of soils
 - (1) Basic concept of fluid flow — Darcy's law
 - (2) Measurement of permeability
 - 6-6. Factors affecting permeability
 - (1) Factors affecting permeability
 - (2) Permeability of stratified soils
 - 6-7. Types of head, seepage forces and quick sand condition
 - (1) Hydrodynamic case — flow condition
 - (2) Hydrostatic case (No flow condition)
 - (3) Downward flow
 - (4) Upward flow (fig. 6-17)
 - (5) Quick sand condition
 - 6-8. Typical examples on effective stress, capillarity and permeability
- Exercises 6

CHAPTER 7 SEEPAGE THROUGH SOILS

- 7-1. Introduction
 - 7-2. Two-Dimensional Flow — Laplace's Equation
 - 7-3. Flow nets
 - 7-4. Properties and uses of a Flow Net
 - (1) Seepage calculation
 - (2) Uplift pressure
 - (3) Exit gradient and piping
 - (4) Pore – Water pressure
 - (5) Methods for obtaining flow nets
 - 7-5. Unconfined flow
 - 7-6. Seepage in anisotropic conditions
 - 7-7. Flow through non-homogeneous sections
 - 7-8. Prevention of erosion — protective filters
 - 7-9. Typical examples of seepage through soils
- Exercises 7

**CHAPTER 8 STRESS DISTRIBUTION IN
SOILS DUE TO SURFACE LOADS**

- 8-1. Introduction
- 8-2. Boussinesq's Equation
- 8-3. Vertical Stress Distribution Diagram
 - (1) Vertical stress isobar diagram
 - (2) Vertical stress distribution on a horizontal plane (Fig. 8-2)
 - (3) Vertical stress distribution on a vertical line (Fig. 8-2)
- 8-4. Vertical Stress Beneath Loaded Areas
 - (1) Line load
 - (2) Strip load
 - (3) Uniformly loaded circular area
 - (4) Uniformly loaded rectangular area
 - (5) Long embankment loading
 - (6) Uniform load on an annular area (Ring foundation)
- 8-5. Influence Chart (Newmark's Chart)
- 8-6. Approximate Stress Distribution Methods for Loaded Area
 - (1) Equivalent point load method
 - (2) Two to one method
- 8-7. Westergaard's Equation
- 8-8. Typical examples of Vertical stresses below applied loads
- 8-9. Contact Pressure
- 8-10. Typical example on stress distribution in soils due to surface loads
- Exercises 8

CHAPTER 9 SOIL COMPACTION

- 9-1. Introduction
- 9-2. Laboratory tests
- 9-3. Factors AFFECTING compaction
 - (1) Water content
 - (2) Type of soil
 - (3) Method of compaction
 - (4) Compactive effort
 - (5) Use of admixture
- 9-4. Structure and engineering behaviour of compacted cohesive soils
 - (1) Structure
 - (2) Permeability
 - (3) Compressibility
 - (4) Swelling
 - (5) Shrinkage
 - (6) Stress-strain relationship
 - (7) Pore water pressure
- 9-5. Compaction in the Field
- 9-6. Compaction Specifications and Field Control
- 9-7. Typical examples of soil compaction
- Exercises 9

CHAPTER 10 SHEAR STRENGTH OF SOILS

- 10-1. Introduction
- 10-2. Stress At point – mohr's circle of stress
- 10-3. Mechanism of shear resistance
- 10-4. Mohr-coulomb's failure criterion
 - (1) Concept of failure in soils
 - (2) Mohr's failure criterion and Mohr's failure hypothesis
 - (3) Coulomb's equation and Mohr-Coulomb's criterion
- 10-5. Measurement of shear strength
 - (1) Direct shear test
 - (2) Triaxial Test
 - (3) Unconfined compression test
 - (4) Vane shear test
 - (5) Special shear test
- 10-6. Shear strength of clayey soils
 - (1) Untrained strength from UU Test
 - (2) Consolidated undrained strength from $\overline{CU}$ test
 - (3) Consolidated drained strength test
 - (4) Shear strength – a unique function of effective stress
 - (5) Comparison of the results of $\overline{CU}$ and CD tests
 - (6) Stress-strain and volume change relationships
 - (7) Effect of strain rate

- 10-7. Shear strength of sands
 - (1) Behaviour of saturated sands under undrained conditions
 - (2) Factor affecting angle of shearing resistance
 - (3) Angle of repose
 - (4) Effect of moisture
 - (5) Effect of intermediate principal stress
- 10-8. Drainage conditions and strength parameters
- 10-9. Stress paths
- 10-10. Pore pressure parameters
- 10-11. Elastic properties of soil
 - (1) Modulus of elasticity
 - (2) Poisson's ratio, μ
 - (3) Shear modulus, G
- 10-12. Typical Examples of shear strength of soils
- Exercises 10

CHAPTER 11 ARCHING IN SOILS AND BRACED CUTS

- 11-2. Cain's theory
- 11-3. Tunnels through sand
- 11-4. Braced excavations
- 11-5. Earth pressure against bracing in cuts
- 11-6. Heave of the bottom of cut in soft clays
- 11-7. Strut loads
- 11-8. Deep cuts — apparent earth pressure diagram
- 11-9. Typical examples of Vertical stresses below applied loads
- Exercises 11

CHAPTER 12 LATERAL EARTH PRESSURE

- 12-1. Introduction
- 12-2. Types of lateral earth pressure
- 12-3. Earth pressure at rest
- 12-4. Earth pressure theories
- 12-5. Rankine's theory
 - 12-5-1. Plastic equilibrium of soil — Active and passive rankine states
 - 12-5-2. Active earth pressure of cohesionless soil
 - 12-5-3. Passive earth pressure of cohesionless soil
- 12-6. Coulomb's earth pressure theory or coulomb's Wedge theory
 - 12-6-1. Active state
 - 12-6-2. Passive state
- 12-7. culmann's graphical method for active pressure for cohesionless soil
- 12-8. rebhann's graphical method for active thrust
- 12-9. Active earth pressure of cohesive soils (Rankine's theory)
- 12-10. Passive earth pressure: Rankine's theory
 - (1) Cohesionless backfill
 - (2) Cohesive backfill
 - (3) Sloping backfill
- 12-11. Typical problems of lateral earth pressure
- Exercises 12

CHAPTER 13 STABILITY OF SLOPES

- 13-1. Introduction
- 13-2. Stability analysis of infinite slopes in sand (Cohesionless soil)
- 13-3. Stability Analysis of Infinite slopes made of clay
- 13-4. Factor of safety
- 13-5. Stability Analysis of Finite slopes
- 13-6. The Swedish slip circle method (Fig. 13-8)
 - (1) $\phi_u = 0^\circ$ analysis
 - (2) $c-\phi$ analysis or method of slices
- 13-7. Method of locating critical slip circle (Fig. 13-12)
- 13-8. Stability of side slopes of Earth dam
 - (1) Stability of down stream slope during steady seepage
 - (2) Stability of up stream slope during sudden draw down
 - (3) Stability of slopes immediately after construction
- 13-9. Friction circle method
- 13-10. Stability Analysis of a finite slope using Taylor stability number
- 13-11. Bishop's method of stability analysis
- 13-12. Typical examples of stability of slope (S.O.S.)
- Exercises 13

CHAPTER 14 COMPRESSIBILITY OF SOILS AND CONSOLIDATION

- 14-1. Introduction
- 14-2. The consolidation process: spring analogy
- 14-3. Consolidation of laterally confined soil
 - (1) Skempton (1944)
 - (2) Houge (1957)
- 14-4. Consolidation settlements, S_c
- 14-5. Soil condition with regard to its consolidation
 - (1) Normally consolidated (N.C.) soils
 - (2) Over consolidated/pre-consolidated (O.C.) soils
 - (3) Under consolidated (U.C.) soils
- 14-6. Determination of pre-consolidation or over consolidation pressure, σ'_p
- 14-7. Terzaghi's theory of one-dimensional consolidation
- 14-8. Solution of the consolidation equation
- 14-9. Laboratory one dimensional consolidation test
- 14-10. Calculation of void ratio
- 14-10-1. Height of solid method
- 14-10-2. Change in void ratio method (Table 14-5)
- 14-11. Coefficient of volume change (m_v)
- 14-12. Compression index (C_c)
- 14-13. Determination of coefficient of consolidation (C_v)
 - 14-13-1. Square root of time fitting method
 - 14-13-2. Logarithm of time fitting method
- 14-14. Determination of coefficient of permeability (k)
- 14-15. Secondary consolidation
- 14-16. Typical solved examples of compressibility of soils and consolidation

Exercises 14

CHAPTER 15 SHALLOW FOUNDATIONS AND BEARING CAPACITY

- 15-1. Introduction
 - (1) Strip footing or continuous footing
 - (2) Spread footing
 - (3) Raft or mat foundation
- 15-2. General requirement of foundations
 - (1) Shear failure criterion
 - (2) Settlement criterion
 - (3) Location and depth criterion
- 15-3. Terminology
- 15-4. Allowable Bearing Pressure for Safe Design
- 15-5. Bearing Capacity of Shallow Foundations
 - (1) General shear failure (GSF)
 - (2) Local shear failure (LSF)
 - (3) Punching shear failure (PSF)
- 15-6. Terzaghi's Bearing Capacity Theory
 - (1) Assumptions
 - (2) Local shear failure
 - (3) Effect of shapes
 - (4) Effect of water-table
 - (5) Skempton's bearing capacity analysis for clayey soils
 - (6) Meyerhof's analysis
 - (7) Hansen's recommendations
 - (8) Vesic's bearing capacity factor
 - (9) IS code recommendation for bearing capacity
 - (10) Two layered system
 - (11) Desiccated soil
 - (12) Bearing capacity of cohesionless soils based on standard penetration test
- For strip footings
- For square and circular footings
- (13) Bearing capacity of cohesionless soils from static cone resistance
- (14) Bearing capacity of footings on layered soils
- (15) Factors affecting bearing capacity
- (16) Presumptive bearing capacity
- 15-7. Settlement of Shallow Foundations
 - (1) Components of settlement
 - (2) Immediate or elastic settlement

- Corrections to settlement due to consolidation
- (3) Seat of settlement
- (4) Settlement of foundations on granular soils
- (5) Method based on static cone penetration test
- (6) Allowable settlement
- 15-8. Allowable Bearing Pressure
 - (1) Granular soils
 - (2) Cohesive soils
- 15-9. Steps Involved in Proportioning of Footings
- 15-10. Typical Examples on Shallow Foundations and Bearing Capacity
- Exercises 15

CHAPTER 16 PILE FOUNDATION

- 16-1. Introduction
- 16-2. Load transfer mechanism
- 16-3. Types of pile
 - 16-3-1. Classification based on material and composition
 - 16-3-2. Classification based on method of installation
 - (1) Driven piles
 - (2) Cast-in-situ piles
 - (3) Driven and Cast-in-situ piles
 - 16-3-3. Classification based on load transfer mechanism
 - (1) End-bearing piles
 - (2) Friction piles
 - (3) Tension or uplift piles
 - (4) Compaction piles
 - (5) Anchor piles
- 16-4. Piles subjected to vertical loads
 - 16-4-1. Pile load carrying capacity based on static formula
 - (2) For non cohesive soil
 - Piles in stratified soil
 - 16-4-2. Pile load carrying capacity based on Dynamic formulae
 - (1) Engineering news formula
 - (2) Hiley's formula
 - 16-4-3. Pile load carrying capacity based on penetration test data
 - 16-4-3-1. Pile load carrying capacity based on standard penetration test N
 - (1) Piles in granular soils
 - (2) Piles in cohesive soils
 - 16-4-3-2. Pile capacity based on static cone penetration test (SCPT) or cone penetration test (CPT)
 - (1) Van Der Veen's method for piles in cohesionless soil (1957)
 - (2) Schmertmann's method for cohesionless and cohesive soils
- 16-4-4. Pile load test
- 16-5. Group action in piles
- 16-5-1. Efficiency of the pile group
- 16-5-2. Design of Pile Groups Pile group in cohesive soil bed
- 16-6. Negative skin friction
- 16-7. Settlement of pile and pile group
 - (1) Settlement of single pile embedded in sand
 - (2) Settlement of single pile embedded in clay
 - (3) Settlement of pile group in sand
 - (4) Settlement of pile groups in clay
- 16-8. Typical examples on pile foundation
 - 16-8-1. Examples based on static formulae
 - 16-8-2. Example based on dynamic formulae
 - 16-8-3. Example based on penetration test data
- 16-9. Laterally loaded piles
- 16-10. Laterally loaded long piles embedded in cohesive soils
- 16-11. Ultimate lateral load analysis: Broms' method
 - (1) Short pile (embedded in sand) [Fig. 16-30(a)]
 - (2) Short Pile (embedded in clay) [Fig. 16-30(b)]
 - (3) Long pile in sand or clay
 - (2) Check for pile head deflection
- 16-12. Allowable Lateral deflection of a pile

- 16-13. IS Code Method:
Lateral load carrying capacity of a pile
(1) For sand and normally consolidated clays
(2) For Preloaded clays or over consolidated clays with constant soil modulus
(3) Calculation of deflection and moment in a long elastic pile
(4) Calculation of moment
- 16-14. Under-Reamed Pile
- 16-15. Load test on Under-reamed piles
- 16-16. Cyclic pile load test
- 16-17. Difference In Fixed Head And Free Head Pile
- Exercises 16

CHAPTER 17 WELL FOUNDATIONS

- 17-1. Introduction
- 17-2. Various Types of Wells or Caissons
(1) Open caissons or well
(2) Box caissons
(3) Pneumatic caissons
- 17-3. Components of a Well Foundation
(1) Well-cap (5) Bottom plug
(2) Steining (6) Dredge hole
(3) Curb (7) Top plug
(4) Cutting edge
- 17-4. Requirement of Shapes of Wells
- 17-5. Depth of A Well Foundation
(1) Minimum grip length below the scour depth
(2) Base pressure within permissible limits
- 17-6. Forces Acting on a Well
- 17-7. Lateral Stability of Well Foundation
(1) Terzaghi's analysis
(2) IRC method
(3) Elastic theory method
(4) Conditions of stability
(5) Ultimate soil resistance method
Base resisting moment, M_b
Side resisting moment, M_s
Friction resisting moment, M_f
- 17-8. Lateral Stability of a Heavy well
- 17-9. Sinking of a Well
(1) Controlled dredging
(2) Eccentric loading
(3) Pulling the well
(4) Pushing the well
(5) Water jetting and/or digging pit on the higher side
(6) Obstacles below the cutting edge and loading
- 17-10. Bearing capacity of a well
- Exercises 17

CHAPTER 18 FLEXIBLE RETAINING STRUCTURES AND COFFERDAMS

- 18-1. Introduction
- 18-2. Cantilever sheet pile wall
- 18-2-1. Cantilever sheet pile in granular soil Assumption
- 18-2-2. Cantilever sheet pile in Granular soils — An Approximate Analysis
- 18-2-3. Cantilever sheet pile in cohesive soil ($\phi_u = 0$ Condition)
- 18-3. Anchored bulkhead
- 18-3-1. Free-earth support method
- 18-3-2. Fixed earth support method
Fixed earth support method for designing the anchored bulkheads
- 18-4. Cofferdams
(1) Earth embankments
(2) Cantilever sheet pile
(3) Double wall cofferdams [Fig. 18-8(c)]
- (4) Braced cofferdams
- (5) Cellular cofferdams [Fig. 18-8(e)]
- 18-5. Typical Examples on flexible retaining structures and cofferdams
- Exercises 18

CHAPTER 19 GEOSYNTHETICS: APPLICATION AND DESIGN

- 19-1. Introduction
- 19-2. Types of Geosynthetic materials
- 19-2-1. Geotextile (GT)
(1) Woven geotextiles
(2) Nonwoven geotextiles
- 19-2-2. Geogrid (GG)
(1) Integral junction geogrids
(2) Fused junction geogrids
(3) Woven junction geogrids
- 19-2-3. Geonets (GN)
- 19-2-4. Geomembrane (GM)
- 19-2-5. Geosynthetic clay liner (GCL)
- 19-2-6. Geofoam 487
- 19-2-7. Geocell 487
- 19-2-8. Geocomposites
- 19-3. Geosynthetics functions
(1) Separation
(2) Reinforcement
(3) Filtration 488
(4) Drainage 488
(5) Moisture barrier/containment
(6) Protection
(7) Stiffening
- 19-4. Application of geosynthetics and controlling functions
- 19-5. Testing and evaluation of geosynthetics
- 19-6. Geosynthetic properties and parameters
(1) Physical properties of geosynthetics
(2) Mechanical properties of geosynthetics
- 19-7. Reinforced earth wall (R.E. wall)
19-7-1. Advantages of R.E. walls
19-7-2. Analysis and Design of R.E. walls
- Exercises 19

CHAPTER 20 LABORATORY EXPERIMENTS AND FIELD EQUIPMENT

- 20-1. Laboratory experiments
- 20-2. Field Equipment used in geotechnical practices
(1) Tipper trucks (Fig. 20-2)
(2) Dump trucks (Fig. 20-3 and fig. 20-4)
(3) Concrete trucks/Transit mixers (Fig. 20-5)
(4) Crawler cranes for pile driving work (Fig. 20-6, fig. 20-7 and fig. 20-8)
(6) Excavators (Fig. 20-9)
(7) Backhoe loaders (Fig. 20-10)
(8) Graders (Fig. 20-11)
(9) Skid steer loaders (Fig. 20-12)

Appendix A INDEX
